variable, like the make program does. This is not the way to find out the version of a program. The version of make can be found with this command: `$ make --version` The output will look like this: `gmake (GNU Make) 3.82 Copyright (C) 1999-2018 Free Software Foundation, Inc. This is free software; see the source for copying conditions. There is NO warranty; not even for MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE.` With that output you can parse it to find the part you need and the GNU make will support this. To find the minimum version number for the make program you would do this: `$ make --version | awk '/GNU Make/ {print $2}' | head -1` 3.82 If you have other versions of make then you can do this to get the version number for all versions: `$ make --version | awk '/GNU Make/ {print $2}' | sort` 3.80.1 3.81 3.82 3.83.1 3.84 3.85 3.86 3.87 3.88.1 Keep in mind that there are build scripts for C

Is your 1 yeras old computer about to crash or start having problems? Do you want to have the ability to help ensure that you could resume your work in the event that it crashes? If this is the case, then the downside about your system crashes could be closing. It could be one of one of the most delicate areas of your computer while using the system. This happens for instance when you utilise outdated operating-system. When you have virus on your laptop or when the operating-system stopped working at optimum usage. If this is the case, then it is essential to apply Virus Scanner in order to maintain your computer

safe. Not just that, as the latest operating-system is no longer virus free, you need to apply anti virus program as well. But wait not anymore, this is what you have been looking for. In this regard, your computer security is more secure. Moreover, you should also ensure that you have the most recent anti-virus installed. This anti-virus software will fight against dangers on your laptop and it will detect any types of virus that may find their way into your computer even the newest operating-system. When you compare the price of the product with its software, you will notice that it's rather cheap. For about \$70, you will get the premium anti-virus protection package that works with every part of your computer. The software that is currently found on the market contains functions like security guard, firewall, system restore, adware and spyware infection that can provide you a secure operating-system. You can also detect the latest malware through this program. This anti virus program works in a manner that will be able to block the risk. In this case, there will be no need for you to use the scanner or any other program to detect the threat that your computer is at risk. This anti virus provides you a continuous protection with the optional scans. What makes this anti virus the best and

the number one anti virus is, it will protect your computer from threats that you are unlikely to see. With this program, you will be able to detect the threat that are not yet visible and may put your computer at risk. Through this software, you will be able to receive the most up to date protection of your computer. If you are looking for more protection, you should try this anti-virus. This package contains anti-virus that can also detect spyware and adware as well as your mail
